About.

Nola Amallia Putri

I am Nola Amallia Putri, a junior architect and graduate of the Architect Professional Program (PPAr) at Universitas Indonesia and Institut Teknologi Sumatera (Bachelor of Architecture).

I believe architecture is not merely about creating beautiful forms, but about shaping spaces that respond to the people who use them. Rather than being the starting point, aesthetics emerge naturally from a thoughtful design process grounded in context, functionality, and human needs. Every project is an opportunity to explore the character of a place and the aspirations of its users. Through a contextual and human-centered approach, I strive to create architecture that is functional, meaningful, and capable of enhancing the quality of everyday life.

Rumah Sejahtera Lansia

The design responds to the increasing elderly population in Indonesia that requires specialized and integrated facilities. Developed through a Therapeutic Architecture approach, the Elderly Welfare Home aims to create a living environment that enhances quality of life, supports independence, and fulfills the physical, psychological, and social needs of the elderly. The design emphasizes a healthy, comfortable environment integrated with nature and the surrounding community to promote long-term well-being and recovery.

DATA

MAIN CONCEPT

The design concept aims to improve the quality of life for the elderly by addressing their **physiological and psychological needs** in an integrated manner through spatial design. Adaptations of the **Tanean Lanjhang** concept are incorporated to encourage social interaction and strengthen a sense of community among residents. Additionally, the environment is designed to resemble a **familiar living space** for the elderly, thereby creating a sense of comfort and helping them adapt to their new surroundings more quickly.

THE CONCEPT OF COMPOSITION

COMMUNICATION FLOW

KEY DESIGN ASPECTS

The selection of materials and colors for the building takes into account the physical and psychological needs of the elderly. Bamboo, used as the primary material, provides good thermal insulation, helping to maintain a stable indoor temperature and create a comfortable and healthy environment for elderly residents.

33. AMBULANCE PARKING
33. VEGETABLE GARDEN
34. VEGETABLE GARDEN

Floor Elevation

The garden is designed to envelop the entire building and blend seamlessly with the interior space, stimulating the senses of the elderly—sight through the green landscape, smell through the scent of flowers, and hearing through the rustling of leaves and the chirping of birds—to provide a sense of psychological calm. Combined with handrails, signage, and the use of adaptive materials throughout the building to address declining physiological functions, this approach comprehensively improves the quality of life for older adults, both physically and psychologically.

Ruang Literasi

The Literacy Room is a reading space designed to foster children's interest in reading through more interactive and enjoyable learning experiences. More than just a place to read, this space combines play, learning, and socializing in a single comfortable environment, allowing literacy to develop naturally as part of children's daily lives.

ISSUES & CONCEPTS

Reading Interest Figures:

Libraries have always been a cornerstone of literacy development. Yet as reading interest continues to decline, a critical question emerges: why are children today becoming increasingly disconnected from these spaces?

MAIN CONCEPT

Children's low interest in reading has led to the design of a facility that serves not only as a place to read, but also as an engaging space to visit and participate in activities. This building integrates learning, play, and socialization, allowing literacy to develop naturally through enjoyable experiences. Reading is incorporated through activities such as storytelling, exploration, and group interactions, rather than as a rigid activity. This concept is then translated into "Playful Sensory Architecture" using a modular design language, similar to LEGO, that creates interactive, imaginative spaces rich in sensory stimulation for children.

- SEMI PUBLIC
- PRIVATE
- SERVICE

Right Elevation

Left Elevation

The building's facade responds to sunlight from the east and west through the use of walls and vertical elements that reduce the intensity of light and heat entering the building. The gaps between these elements still allow for natural light and air circulation, creating thermal comfort without compromising the quality of the interior spaces. Additionally, there is a modular secondary skin inspired by LEGO—that reinforces the building's identity while helping to filter out excess sunlight before it enters the spaces.

The first floor serves as a reception area and waiting room designed to be interactive for children.

SECTION A-A

SECTION B-B

Floors 1-3 are designed as the main activity areas for children, **supporting learning, play, reading, and social interaction**. The 4th floor serves as an administrative and book storage area, ensuring that children's activities remain centered on the **safer and more accessible floors**.

MATERIAL

The use of textured materials, attractive colors, and LEGO's modular design responds to children's sensory needs, creating a space that is interactive, imaginative, and encourages exploration through hands-on experiences.

Movement Studio

Movement Studio is a fitness center that offers an experience centered on movement as part of the process of restoring the body and mind. Through the integration of space, landscape, and natural light, each activity is designed to take place in a healthy, peaceful, and refreshing environment.

MAIN CONCEPT

Movement Studio begins with a simple question: how can a fitness space feel like a long exhale in the middle of a city that never stops? The concept of Urban Retreat Through Courtyard offers the answer. The building mass is broken apart and arranged around a central courtyard and garde, not as aesthetic gestures, but as the very logic of how the space operates. Yoga, pilates, and gym each maintain a direct relationship with the outdoors, both visually and physically. Vegetation, natural light, and circulation deliberately routed through open air create an environment that feels genuinely alive. Movement between spaces becomes more than functional transition it becomes a small spatial experience that offers pause.

5. GYM
6. FITNESS AREA
7. PILATES LOCKERS
8. PILATES CHANGING R
9. PILATES ROOM
10. YOGA

Wide openings facing the garden allow natural light, ventilation, and views of greenery to become part of the exercise experience. The integration of indoor spaces and the landscape creates an environment that promotes focus, relaxation, and the well-being of users.

As a transitional space, the Changing Room is designed to provide a comfortable experience through a combination of terrazzo, wood finishes, and a terracotta color palette. Organic shapes and indirect lighting create a warm and intimate atmosphere, supporting both the preparation and recovery processes after exercise.

Pancoran House

This residence was designed as a retirement home for a married couple seeking a comfortable, warm, and easy-going lifestyle. The design focuses on creating spaces that support daily activities without barriers, featuring a simple layout with minimal partitions and a seamless flow between rooms. Through strong connections to the front and back gardens, the home provides natural light, good air circulation, and a peaceful atmosphere. Each space is designed so that the residents can enjoy their daily lives more comfortably, maintain their independence, and feel the warmth of home as a place to enjoy their golden years.

MAIN CONCEPT

The concept of "Warm Connected Living" emphasizes the interconnectedness of spaces and the warmth of the home as a place to enjoy one's golden years. An open floor plan with minimal partitions and direct access to the front and back gardens creates comfortable circulation, optimal natural lighting, and an atmosphere that fosters both interaction and tranquility. The home is designed not merely as a place to live, but as a space that accompanies its residents through every phase of life in comfort.

The use of white materials and wood finishes gives the space a warm and timeless character, while creating a comfortable, peaceful, and homey living atmosphere.

Djawara

This project is a café designed as a welcoming gathering space that offers a warm, comfortable, and elegant atmosphere. The design prioritizes spatial quality, natural lighting, and ventilation to create an inviting environment that supports social interaction while providing a memorable experience for every visitor.

MAIN CONCEPT

A high-pitched gable roof, expansive openings, and generous ceiling heights maximize natural daylight and cross ventilation while creating a bright and spacious interior. The combination of natural materials and contemporary architectural elements establishes a warm, elegant, and timeless character, reinforcing the café as a comfortable and inviting place to gather.

The combination of wood, black steel, glass, and natural stone creates a warm yet modern atmosphere. The green ceramic accents in the bar area reinforce the space's identity as a key visual element.

Creating a modern, warm, and comfortable gathering space through simple architectural forms, an iconic gabled roof, high ceilings, and wide openings that maximize natural light. Natural materials are combined with modern elements to create an elegant and memorable building.

Area semi-outdoor dengan taman di bagian tengah menciptakan suasana yang hijau, asri, dan nyaman, sekaligus memperkuat hubungan antara ruang dalam dan ruang luar.

BIBU HOUSE

Inspired by the client's desire for a modern home that embodies "quiet luxury," this project emphasizes refined simplicity through the composition of materials, colors, and lighting. The predominance of a neutral color palette, natural materials, and warm lighting creates an elegant atmosphere without being ostentatious. The open floor plan and natural lighting further enhance comfort while offering a warm and timeless spatial experience.

The lighting is strategically placed to highlight the beauty of the materials, emphasize architectural elements, and create a warm, elegant, and sophisticated atmosphere without feeling excessive.

Topgolf Kemang

The renovation of the Topgolf Kemang Private Room preserves Topgolf's visual identity through its signature color palette. The space was designed with flexibility in mind to accommodate a variety of needs, featuring accents such as brass tones that enhance its elegant and exclusive feel.

MAIN CONCEPT

This design features a flexible, multifunctional space concept, allowing a single room to adapt to various needs, such as meetings, karaoke, and golf.

Lighting serves as both a functional element and a focal point that enhances the character of a space.

Modular tables are designed for flexibility in use and space arrangement.
